

The one piece Locking Cap

A unique Tank Security
Locking Cap using

patented **Spin Secure™**
technology

Spin Secure™

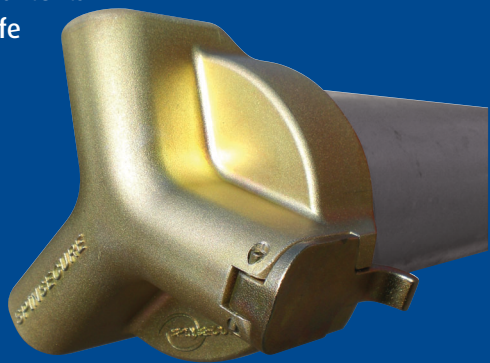

Spin Secure™ offers

unrivalled Security for your storage tank

The Tank Locking Device is a 2" fill point cap that offers unrivalled security for the fluid in your tank.

It's clever design utilises a patented system which means that when the cap is locked, it spins freely and is almost impossible for anybody to remove.

Most existing locking caps are supplied in two pieces and are often secured in place using low quality padlocks which can easily be removed or broken. The Spin Secure™ locking cap eliminates this problem due to it's "one piece" padlock free design and as a result there are no torque points for thieves to access, ensuring your tank contents are as secure and safe as possible.

- Free spin design when locked in place
- Eliminates crow bar access
- Easy to fit
- No installation tools required
- One piece design
- Integral lock so no exposed or weak padlocks
- Supplied with three keys
- Up to 50,000 locking combinations
- Multiple key configurations available
- Made from non ferrous zinc alloy
